PhD student in Medicinal Chemistry

The Institute of Medicinal and Pharmaceutical Chemistry at the Technische Universität Braunschweig has a temporary vacancy for a research assistant (PhD student, 0.5 TV-L EG 13) starting April 2021.

Applications from graduates of pharmacy or related study programs with an interest in a doctorate in metallodrug research (medicinal inorganic chemistry, bioorganometallic chemistry) are particularly welcome. The research group pursues interdisciplinary topics in the fields of "drug synthesis", "pharmaceutical bioanalytics" and "in-vitro drug testing" and specialises in the development and biochemical investigation of metal based drugs. The focus of the doctoral project will be the analysis of gold metallodrugs.

In teaching, contributions to courses according to the Approbationsordnung für Apotheker (licensing regulations for pharmacists) in the subject of pharmaceutical chemistry are expected.

The Technische Universität Braunschweig aims to increase the proportion of women and therefore strongly encourages qualified female scientists to apply. As a rule, women with equivalent qualifications should be given priority. Severely disabled persons with equal qualifications will be given preference.

Applications with the usual documents in electronic form (preferably in a single PDF file) are requested by **31.01.2021** to Prof. Dr. Ingo Ott (by e-mail to: ingo.ott@tu-bs.de). Personal data will be stored for the purposes of the application procedure.
